WORK EXPERIENCE

Freelance Android Developer (Novermber 2017 — Present time)

As my first freelance project I developed an app that lets user create collages. The videos can be taken with the in-app camera or can be loaded from the gallery.

Collages are created with ffmpeg, compiled for Android from sources with a standalone NDK toolchain. The app follows clean architecture principles which allow it to be highly modular. I wanted to provide a common base for the apps with similar features which the client intended to make in the future.

While working on this project I learned to work with media, video processing and multi-module projects. Also it was my first experience working with a real client, and I learned to communicate and make sure he's satisfied with the result.

«Brilliant, organized, communicative and a wonderful programmer. One of the best Android programmers we have had the pleasure and privilege of working with on Upwork.» — from the client's review.

Android Developer (August 2017 — September 2017)
Yandex, leading search engine in Russia

Me and my team (a manager, a designer and 4 Android developers) developed an app during Yandex Mobile Development School (the details are under an NDA). I was responsible for writing the core module of the app and joining together the modules other team members were developing.

I learned to collaborate with designers, making the app look exactly like the provided designs, and also with other developers.

SKILLS

Languages: Java, Kotlin
Frameworks: RxJava, Dagger 2
Databases: SQLite/Room, Realm, Firebase
Design tools: Figma, Zelpin, Adobe Photoshop, Illustrator, After Effects
Minor skills: Python, HTML/CSS/JavaScript, Vue.js, C#, C++

EDUCATION

Taganrog Aviation College 2013 — 2017
College
Programming

TMOL 2004 — 2013
School

PERSONAL INTERESTS

- Playing drums
- Skateboarding
- Learning languages
- Traveling
